## Quality of Life Summary

Based on the provided patient narrative excerpts, here is a summary of Mary Simpson's overall quality of life concerns:

### Physical Symptoms and Functional Limitations:

Mary expresses her desire to be able to do more activities physically, mentioning wanting to play with her grandchild and go on family trips. She also hopes to be able to keep up physically without being limited by her condition.

### Body Image Concerns:

Mary is self-conscious about having a large bump (presumably referring to the hernia) and wants to be able to enjoy life again without being concerned about it.

### Mental Health Challenges:

Mary's mental health keywords include frustration or irritability, social withdrawal, feeling overwhelmed, anxiety, rumination, hopelessness, and low mood or depression. She hopes that surgery will help her manage her pain and improve her overall well-being.

**Impact on Interpersonal Relationships:**

Mary wants to be able to spend quality time with her partner and family without being limited by her condition. She is concerned about not being able to participate in activities with them due to physical limitations.

**Employment and Financial Concerns:**

There is no explicit mention of employment or financial concerns in the provided excerpts.

Note: The summary only reflects information directly from the patient's narrative excerpts, avoiding any inferences or assumptions.
